GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

EXHIBIT A

ORIGIN AND HISTORY OF THE VARIETY

The original cross for AGRIPRO 25 (Ex 50525) was made in 1968 between Beeson and Calland. The F1, F2, and F4 generations were advanced in a winter nursery. The F3 generation and F5 plant rows were grown in Iowa. Early generations were advanced by single seed descent. The line 7913 was an F4 derived line. The line was tested as Ex 50525 in 1971, 1972, and 1973. Several hundred single plant selections were made to purify the variety and purification blocks grown in 1973. The variety is stable for characteristics of plant type and maturity.

EXHIBIT B

BOTANICAL DESCRIPTION OF AGRIPRO 25

AGRIPRO 25 (Ex 50525) is a northern, indeterminate soybean variety of maturity group III. It matures at about the same date as Calland in central Iowa and is adapted to areas of the midwest in which Calland is adapted.

The flowers are purple and the pubescence gray. Seed color is yellow and hilum color is imperfect black.

AGRIPRO 25 has normal shaped leaves as distinct from "ovate" or "narrow" leaf.

DATA INDICATIVE OF NOVELTY

AGRIPRO 25 most closely resembles Calland of the Group III soybean varieties. It has the same maturity as Calland, but differs from Calland in its gray pubescence. Also, AGRIPRO 25 is two to three inches shorter than Calland and lodges less. AGRIPRO 25 has been consistently higher yielding than Calland in our tests and experiment station tests. It is resistant to races 1 and 2 of *Phytophthora megasperma* var *sojae*.
